The EHA - Runners lend themselves to a variety of uses and have a closed surface of soft and elastic plastic material.

EHA – Runners provide a high level of step security due to their profiled top surface. As a result of the structured underside of the runners an ergonomic effect is achieved, and this with a total height of only 5mm. The longitudinal edges of the EHA runners have been flattened so that they prevent against trip hazards.

- Ergonomic
- Easy to lay down
- UV-resistant
- Resistant to the most common chemicals
- Scrollable
